(b) the product-specific rules of origin apply to goods in which non-originating materials have been used in the production process, as provided for in Article 3.2(c);

(c) in the case that a good is subject to alternative product-specific rules of origin, the good shall be originating if it satisfies any of the alternative product-specific rules of origin;

(d) if a product-specific rule of origin is defined by a criterion of change of tariff classification followed by the expression "ex", it shall mean that the materials

CHAPTER 27: MINERAL FUELS, MINERAL OILS AND PRODUCTS OF THEIR DISTILLATION; BITUMINOUS SUBSTANCES; MINERAL WAXES		
Chapter Note: Any good of headings 27.07 through 27.10 that is the product of a chemical reaction shall be considered to be an originating good if the chemical reaction occurred in the Area of Hong Kong, China or Peru. For the purposes of headings 27.07 through 27.10, a “chemical reaction” is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of atoms in a molecule. The following processes are not considered to be chemical reactions for the purposes of this definition: (a) dissolving in water or other solvents; (b) the elimination of solvents including solvent water; or (c) the addition or elimination of water of crystallisation. For the purposes of heading 27.10, the following processes confer origin: (a) Atmospheric distillation - A separation process in which petroleum oils are converted, in a distillation tower, into fractions according to boiling point and the vapour then condensed into different liquefied fractions. Liquefied petroleum gas, naphtha, gasoline, kerosene, diesel/heating oils, light gas oils and lubricating oils are produced from petroleum distillation. (b) Vacuum distillation - Distillation at a pressure below atmospheric but not so low that it would be classed as molecular distillation. Vacuum distillation is useful for distilling high-boiling and heat-sensitive materials such as heavy distillates in petroleum oils to produce light to heavy vacuum gas oils and residuum. In some refineries, gas oils may be further processed into lubricating oils. Vacuum distillation must occur at 550 degrees centigrade minimum temperature and the process must distil at least 70 percent by volume.

SECTION VII PLASTICS AND ARTICLES THEREOF; RUBBER AND ARTICLES THEREOF		
Section Note: Any good of Chapters 39 through 40, except a good of headings 39.19 through 39.26, that is the product of a chemical reaction shall be considered to be an originating good if the chemical reaction occurred in the Area of Hong Kong, China or Peru. For the purposes of Chapters 39 through 40, a "chemical reaction" is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of atoms in a molecule. The following processes are not considered to be chemical reactions for the purposes of this definition: (a) dissolving in water or other solvents; (b) the elimination of solvents including solvent water; or (c) the addition or elimination of water of crystallisation.
